ANIMAL

- Mammals

Mammals belong to the class Mammalia within the animal kingdom. They are characterized by features like hair/fur, mammary glands, and the ability to give birth to live young. Mammals include a diverse range of species such as humans, elephants, dogs, and whales.

- Carnivores

Carnivores are a group of animals that primarily feed on other animals for sustenance. This dietary preference sets them apart from herbivores and omnivores. Examples of carnivores include lions, tigers, wolves, and eagles.

- Herbivores

Herbivores are animals that mainly feed on plants and vegetation as their primary food source. It is essential for their diet to maintain a healthy nutrition intake. Examples of herbivores include cows, horses, rabbits, and deer.

- Birds

Birds are a diverse group of animals belonging to the class Aves. They are known for their feathers, beaks, and wings, which enable them to fly. Birds are warm-blooded vertebrates and are considered the closest living relatives to reptiles.

- Raptors

Raptors are birds of prey known for their sharp talons and keen eyesight, such as eagles, hawks, and falcons. They are carnivorous hunters that play a crucial role in maintaining the ecosystem by controlling populations of smaller animals. Raptors are characterized by their hooked beaks, powerful wings, and exceptional hunting skills.

- Waterfowl

Waterfowl are a type of bird that are well adapted to life on the water, commonly found in wetlands and freshwater habitats. They include species such as ducks, geese, and swans. Waterfowl have webbed feet, waterproof feathers, and unique bill shapes that help them thrive in their aquatic environments.

- Reptiles

Reptiles belong to the class Reptilia and are cold-blooded vertebrates. They include snakes, lizards, turtles, and crocodiles. Reptiles lay eggs on land and have scales covering their bodies to protect them from harm.

- Snakes

Snakes are elongated, legless reptiles that belong to the animal kingdom. They are cold-blooded vertebrates known for their distinct scale-covered bodies. These carnivorous creatures play important roles in ecosystems by controlling rodent populations and serving as prey for other animals.

- Turtles

Turtles are reptiles known for their protective shell. They can live both in water and on land. There are various species of turtles found all around the world.
